EXECUTIVE SUMMARY

- Analysis of the Stack Overflow Developer Survey shows that **JavaScript remains the most widely used programming language**, followed by SQL and Python.
- In the database category, **PostgreSQL and MySQL are the most commonly used systems**, while PostgreSQL is also among the most desired technologies for future work.
- Among cloud platforms, **Amazon Web Services (AWS), Microsoft Azure, and Google Cloud** are the most widely used solutions.
- The demographic analysis shows that **most developers are between 25 and 44 years old** and a large proportion hold a bachelor's or master's degree.
- These results highlight key technology trends in the developer ecosystem and may help developers choose technologies to learn and companies understand current industry demand.

INTRODUCTION

Nowadays, the developer ecosystem includes a wide range of technologies. Some of them are widely used in the industry, others are rapidly gaining popularity, while some are gradually losing relevance. However, how do these trends look when we analyze real data?

This report may be useful for people working in the technology industry as well as for those considering a career change. By analyzing data from the Stack Overflow Developer Survey and job market information, this report provides insights into current technology trends.

The analysis focuses on several key questions: which technologies are the most widely used by developers, which technologies developers would like to work with in the future, which technologies offer the highest earnings, and whether the demand for certain technologies in job postings corresponds to the number of specialists working with them.

METHODOLOGY

- Data Sources:
 - Stack Overflow Annual Developer Survey 2024 (CSV file)
 - Job postings from Naukri.com (collected via API, JSON format)
 - Programming languages dataset (web scraped)
- Data collection methods:
 - Downloading and loading CSV data
 - Collecting data via API (Naukri.com)
 - Web scraping from external sources
- Key wrangling steps:
 - Removed incomplete or non-informative responses (e.g., missing values, "Prefer not to say")
 - Converted data types for numerical analysis (e.g., age ranges to numeric values)
 - Handled missing values using data imputation where appropriate
 - Normalized selected variables when needed
 - Split multiple-choice responses into separate rows for analysis (e.g., languages, databases)

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

Findings

- JavaScript maintains its dominant position in both current usage and future interest rankings with 79.3% of respondents reporting they have worked with this programming language
- The number of respondents who want to work with **PHP** and **PowerShell** is nearly **40%** lower than those who have worked with these languages
- The number of respondents interested in **Go** and **Rust** is significantly higher (by **71.3%** and **145.1%** respectively) compared to current usage

Implications

- There may be an increasing interest in Rust and Go among developers, which could lead to a growth in the number of specialists in these technologies
- Developers appear less willing to work with PHP, PowerShell, and Java, which may result in a potential shortage of specialists if market demand remains stable
- Technologies such as SQL, Python, TypeScript, and C# appear relatively stable in terms of both usage and interest

DATABASE TRENDS

Current & Past Usage

Future Interest

Quantitative Changes in Top 10 Databases

			change between DatabaseHaveWorkedWith and WantToWorkWith	
In Top 10 Want to work with?	Row Labels	Count of DatabaseHaveWorkedWith	In Top 10 have worked with?	Count of DatabaseWantToWorkWith
Yes	PostgreSQL	11514	Yes	12193
Yes	MySQL	8556	Yes	6384

Yes	MongoDB	5930	Yes	6204
Yes	Microsoft SQL Server	5870	Yes	5618
Yes	Redis	5814	Yes	4345
Yes	MariaDB	3994	Yes	3665
Yes	Elasticsearch	3491	Yes	3078
Yes	Dynamodb	2268	Yes	2154
No	Oracle	1907	No	1623
	Top 10 total			Top 10 total
		56365		51559

Note: Multiple responses were allowed. Counts represent the number of respondents selecting each database, therefore totals may exceed the total sample size (N = 18,846).

DATABASE TRENDS - FINDINGS & IMPLICATIONS

Findings

- PostgreSQL is the most popular database among developers in both current usage and future interest rankings
- Oracle, MySQL, Microsoft SQL Server, and MariaDB show a noticeable decline in developer interest compared to current usage, with **Oracle** experiencing the largest decrease (**-41.6%**)
- **Supabase** shows strong growth in interest, with **44.7%** more respondents wanting to work with it compared to current usage

Implications

- PostgreSQL demonstrates a strong and stable market position, with both high current usage and even higher future interest, which may indicate continued growth
- Differences between current usage and future interest suggest that the most widely used databases have well-established positions in the market
- The significant decline in interest in Oracle may indicate a shift away from certain traditional or enterprise-focused database systems

Respondents distribution by age

Age

- 25-34 years old
- 35-44 years old
- 18-24 years old
- 45-54 years old
- 55-64 years old
- Under 18 years old
- 65 years or older

Respondents distribution by formal education level

Respondents distribution

Respondents count by age, classified by education level

DISCUSSION

OVERALL FINDINGS & IMPLICATIONS

Findings

- Most respondents are located in Europe and North America
- Nearly 85% of respondents are between 18 and 44 years old
- 93.2% of respondents have attended university or college
- Node.js(9,230 respondents) and React(8,999 respondents) are two dominant web frameworks in both current usage and future interest
- Amazon Web Services (AWS) maintains the leading position in both current usage and future interest

Implications

- Experience with university or college education appears to be a common entry path into the developer world
- Companies focusing on the most popular platforms may have access to a significantly larger pool of developers — for example, AWS is used by over 57.7% of respondents, while the 10th-ranked platform (Hetzner) is used by only 7.4%
- The concentration of respondents in Europe and North America suggests that the survey results may be less representative of other regions

CONCLUSION

The analysis shows that the current technology landscape is both stable and highly concentrated around a relatively small set of dominant tools. Technologies such as JavaScript, SQL, HTML/CSS, TypeScript, Python, PostgreSQL, AWS, Node.js, and React not only lead in current usage but also maintain strong positions in future developer preferences.

At the same time, the data suggests that changes in the ecosystem are gradual rather than disruptive — most developers continue to rely on well-established technologies, while only a few emerging tools show signs of growing interest.

The results also highlight that the developer population is relatively young and highly educated, which may influence both technology adoption and future industry trends.
